

## **£400k First Tier Automotive Contract Secured**

Release: October 2016

LVS Small Plastics Parts have a proven track record of supplying leading international automotive companies on a Tier 3 to Tier 2 basis. We are delighted to announce that we have now won a contract to supply on a T2 to T1 basis. The product range includes both painted and grained 'A' face cabin components for a high end Automotive manufacturer.

The project involves 6 new tools, and we have had full involvement in tool development (including FMEA). We are subsequently managing the overseas tooling production. The project is being overseen by a dedicated Project Manager. Our customer has cited reasons for our securing this prestigious project as including:

- Previously meeting their stringent logistics requirements.
- Proven quality systems, having recently passed three VDA 6.3 audits for example.
- In-house tool trials backed by a dedicated on-site metrology facility with state of the art CNC CMM equipment.
- In-House tool room to carry out modifications and repairs as required.
- Modern fully automated production facilities.
- Strong project management: European Purchasing Officer says, *"Understanding of RFQ process, reactivity on Buy Beyond, improvements on negotiations, reactivity on parallel topics you are managing for other programs are making LVS stronger in front of all the programs you are quoting"*.
